

## ALBEDO MEASUREMENT FOR BIFACIAL PLANT ENERGY MODELING

GroundWork offers albedo measurement as an addition to our Rey MET System. Albedo measurement provides an input for bifacial plant performance modeling that reduces the uncertainty of energy production assessments.

When included in a comprehensive ground measurement campaign and GroundWatch®, our best-in-class data quality program, the Rey System with Albedo Measurement offers the highest measurement accuracy and availability to produce a ground dataset for bifacial energy modeling.

- Long term campaign, or
- Short-term study with or without cellular communication package
- Industrial grade
- Self-powered
- For use in all weather conditions
- Low-impact fencing if site conditions warrant protection
- Plant ground condition simulation included
